Webtrekk

JavaScript Developer Challenge

Create a Single Page Application with the following requirements.

General requirements:
- Implement in JavaScript using a framework of choice (we like Angular a lot)
- Write JavaScript tests using Jasmine, Mocha, …
- The app should run in evergreen browsers
- Provide documentation
- Use RWD (feel free to use bootstrap, foundation, ...)
- Use Git while creating this project and if possible Github
- Use a familiar build process
- Feel free to use Typescript or ES6

Specification:
- Overview page:
    o Lists all customers
    o Add a new customer
    o Link to edit a customer ('Customer Detail' page)
    o Delete a customer

- Customer Detail page:
    o Edit & remove profile data

- Store the data locally (data: https://github.com/webtrekk/js-challenge-data)

Bonus:
- Setup a node server
- Use persistent data storage (MongoDB, ...)
- Host the application (Heroku, …)
- Continuous Integration & Development (we like Jenkins & Travis)

Go crazy, impress us with your design & knowledge.
Show us the hero that you are!
